FUNCTIONING

KNOW-HOW COMPANY

know how to manage the process for the production of hydrogen / oxygen (HHO) and Hydrogen, through the design and construction of an electrolytic cell with a particular design combined with specific electronics that allow controlled gas delivery, with collection of information both from the engine that from the cell and with instant processing of the new parameters of both frequency and duty-cycle.

PATENTS

In two years we have filed 5 patent applications. For two of them an international application has been filed ("Electrolytic Cell" n. 1020200000003650 of February 21, 2020 "Electric power supply for Electrolytic Cell" n. 1020200000008329 of April 20, 2020)
